I strongly oppose HR4026. If I want to listen to local radio all I have to do is turn off my XM. It's my choice to not turn off my XM. If local broadcasting filled my needs it would be different, but it doesn't. I enjoy driving across country and having the music that I like always available and also being able to route myself according to the weather forecasts, that I am able to get ahead of time and being able to bypass, when possible, traffic problems so that I'm not adding to them. Again, I strongly oppose HR4026!
